

# Process & Decision Documentation

## Entry Header

Name: Senuji Thennakoon

Role(s): Coder

Primary responsibility for this work: Coding

### *Goal of Work Session*

Briefly describe what you were trying to accomplish during this phase of the assignment.

Examples:

- Revising a code to fit the side quest prompt

### Tools, Resources, or Inputs Used

- Lecture Notes

### *GenAI Documentation*

Everyone must complete this section. If not GenAI was used, write, “No GenAI used for this task.” When GenAI is not used, process evidence should still demonstrate iteration, revision, or development over time.

Because GenAI can closely mimic human-created work, instructors or TAs may occasionally request additional process evidence to confirm non-use. This may include original working files (e.g., an illustrator file), intermediate drafts, or a brief check-in with a TA to walk through your process.

These requests are not an assumption of misconduct. They are part of ensuring academic integrity in an environment where distinguishing between human-created and AI-generated work is increasingly difficult.

If GenAI was used (keep each response as brief as possible):

No GenAI used for this task.

*Summary of Process (Human + Tool)*

Describe what you did, focusing on process rather than outcome. This may include:

- Testing and revision: Adjusted the speed and movements of the blob to make it depict anxiety.
